										—	1	LP1K1201

Table 18.5: Coil Voltage Codes for DC Contactors

Coil with integral suppression device available. Add 3 to the code required (for example, JD3). [7]

Vdc	12	20	24	36	48	60	72	100	110	125	200	220	230	240	250
Code	JD	ZD	BD	CD	ED	ND	SD	KD	FD	GD	LD	MD	MPD	MUD	UD

[1] Complete the catalog number with the coil voltage code from Table 18.3 Coil Voltage Codes for AC Contactors, page 18-2 (for example, LC1K0610**G7**).
[2] For spring terminal clamps, add a **3** before the coil voltage code (for example, LC2K06103G7). Spring terminal clamps reduce some of the HP and continuous current ratings of the TeSys K contactors. For ratings, please refer to Table 18.2 TeSys K Contactors with Spring Terminal Clamps, page 18-2.
[3] For solder pin terminals, add a **5** before the coil voltage code (for example, LC1K09105B7).
[4] For slip-on terminals, add a **7** before the coil voltage code (for example, LC1K12107M7).
[5] Applies to all TeSys K contactors (LC1K, LC2K, LC7K, LC8K, LP1K, LC2K, LP4K and LP5K).
[6] Complete the catalog number with the coil voltage code from Table 18.5 Coil Voltage Codes for DC Contactors, page 18-2 (for example, LP1K09004**BD**).
[7] 3 W inrush.

220 V	MD
250 V	UD
440 V	RD

[36] Use this table **only** to interpret current catalog numbers. Some combinations are not available.

[37] For spring terminal versions of LC1D09–LC1D65A, add **3** to the catalog number prior to adding the voltage code (for example, LC1D12G7 becomes LC1D12**3**G7, and LC1D40AG7 becomes LC1D40A**3**G7. Note that 40–65 A spring terminals are only on the control terminations and not on power terminations).

[38] For ring tongue versions of LC1D09–LC1D65A and LC1DT20–LC1DT80A, add **6** to the catalog number prior to adding the voltage code (for example, LC1D09G7 becomes LC1D09**6**G7, and LC1D50AG7 becomes LC1D50A**6**G7).

[40] Complete the catalog number by adding the coil voltage code from Table 18.23 TeSys D Coil Voltage Codes, page 18-8 for example, LC1D09**G7**).

[41] For ring tongue versions of LC1D09–LC1D65A and LC1DT20–LC1DT80A, add **6** to the catalog number prior to adding the voltage code (for example, LC1D09G7 becomes LC1D09**6**G7 and LC1D50AG7 becomes LC1D50A**6**G7).

[42] For spring terminals versions of LC1D09–LC1D65A, add **3** to the catalog number prior to adding the voltage code (for example, LC1D12G7 becomes LC1D12**3**G7 and LC1D40AG7 becomes LC1D40A**3**G7. Note that 40–65 A spring terminals are only on the control terminations and not on power terminations).

[43] For slip-on connector versions of LC1D09 and LC1D12 only, add **9** to the catalog number prior to adding the voltage code (for example, LC1D09G7 becomes LC1D09**9**G7).

[44] For DC version of these devices, replace the **C** with a **P** (for example, L**C**1D80004•• becomes L**P**1D80004••). This applies only to 80 A, 4-pole devices.

[45] For additional voltage codes refer to the Control and Protection Components Catalog **MKTED210011EN**.

[46] Not available for LC1D80–LC1D150.

Voltage	24	48	110	120	220	230	240	380	400	415	440
Coil Code	B7	E7	F7	G7	M7	P7	U7	Q7	V7	N7	R7

[48] Includes mechanical interlock without electrical contacts. Installer to complete wiring for electronically interlocking contactor operating coils by using a N.C. auxiliary contact integrated in the contactor or optional LADN or LAD8N auxiliary contact block.
[49] For LC2D09–LC2D38, electrical interlock can be included by adding a **V** to the end of the catalog number (for example LC2D09B7**V**).
[50] For these items, order two non-reversing contactors and one mechanical interlock separately. See TeSys™ D Non-Reversing Contactors, page 18-8 for selection.
[51] Includes mechanical interlock (LA9D11502) with prewired electrical contacts for interlocking contactor operating coils.
[52] Complete the catalog number with the voltage code from Table 18.29 Coil Voltage Codes for TeSys D Capacitor Contactor (50/60 Hz), page 18-10 (for example, LC1DFK**G7**).

TeSys F replacement coils and parts: TeSys F Contact Kits, Arc Chambers, page 18-48, TeSys F AC Coils, page 18-44, and TeSys F DC Coils, page 18-47
TeSys F dimensions: TeSys F Contactors, Dimensions, page 18-53,TeSys™ F Overload Relay Dimensions, page 18-61

[54] Complete the catalog number with the coil voltage code from Table 18.32 TeSys F Coil Voltage Codes, page 18-12 and Table 18.33 Coil Voltage Codes for AC and DC Voltages for F800, page 18-12 (for example, LC1F115**G7**). All coils except F780 include 1 N.O. holding circuit interlock contact. The F780 uses 2 coils that must be wired in series.
[55] For additional voltage codes refer to the Control and Protection Components Catalog **MKTED210011EN**.
[56] DC coils for 3-pole contactors are fitted with built-in surge suppression as standard.
[57] When mounting overload relays LR9F5●57–LR9F5●71 and LR9F57–LR9F71 directly beneath the contactor, supporting the relays with a mounting plate is recommended. With overload relays LR9F7●75–LR9F7●81 and LR9F75–LR9F81, use of a support mounting plate is mandatory. Refer to TeSys F Overload Relay Accessories, page 18-22.
[58] Interconnection kit LA7F407 is required to mount an LR9F5●71 and LR9F71 to an LC1F185.

TeSys™ F Reversing Contactors

Components are available for customer assembly of TeSys F reversing contactors. For example, the following components must be ordered to build a reversing contactor, 75 hp @ 460 V, with a 120 V / 60 Hz coil:

Table 18.35: Example of Components

Description	Quantity	Catalog Number
Contactors	2	LC1F115G6
Lugs (Suppressor Blocks, Lugs, page 18-21)	6	DZ2FF1
Auxiliary contacts	2	LADN11
Power connections	1	LA9FF976
Mechanical interlock	1	LA9FF970

Class 3211 04

[5] For low consumption coils (LC1D09–D38 only), only one front-mounted two-contact block allowed. No side-mounted contact blocks allowed.
[6] For spring terminal versions of these blocks, add a **3** to the end of the catalog number (for example, LADN22**3**). For slip-on versions, add **9** to the end of the catalog number (for example, LADN22**9**).
[7] Including 1 N.O. + 1 N.C. make-before break overlapping contacts.
[8] This block cannot be added to the LC1D 09–D38 contactors; a maximum of 2 blocks can be mounted on the LC1D40A-LC1/LP1D80 contactors only.
[9] 1 block may be added to the left side of LC1D09–D38, AC coils only; only 1 block may be added to either side of the LC1D40A-D80 contactors, AC coils only. Cannot be installed on TeSys D contactors with DC coils.
[10] Device supplied with 4 ground terminal points.
[11] For spring terminal versions of these blocks, add a **3** to the end of the catalog number (for example, LADT2**3**).
[12] Scale range is expanded between 0.1 and 0.6 seconds on the dial for more accurate settings at the lower end of the range.
[13] Switching time between the opening of the N.C. contact and the closing of the N.O. contact: 40 ms ± 15 ms .
[14] To complete the catalog number, add the coil voltage code from Table 18.51 Coil Voltage Codes for LA6DK Mechanical Latch Blocks, page 18-15 (for example, LAD6K10F).
[15] Does not include internal coil clearing contact.
[16] Low consumption DC contactors (and relays) (code coil ●L) are not compatible with the LAD6K10● mechanical latching blocks.

LA4DA1U

RC and Varistor Coil Suppressors

RC Coil Suppressor

- Limitation of transient voltage to 300% of nominal voltage maximum.
- Oscillating frequency limited to 400 Hz maximum. Slight increase in drop-out time (1.2 to 2 times normal).

Table 18.57: Resistor/Capacitor Circuit (RC) for Reduction of Electrical Noise in AC Contactor Coils

Installed by	Mounting on	Operating Voltage 50/60 Hz	Catalog Number
Snapping into the cavity on the right side without tools[17]	LC●D09 to D38 (3P), LC1DT20 to DT40 (4P)	24–28 Vac	LAD4RCE
		50–127 Vac	LAD4RCG
		110–240 Vac	LAD4RCU
Snap-on mounting, and connection without tools to the contactor coil terminals	LC1D40A to 65A (3P), LC1DT60A to DT80A (4P)	24-48 Vac	LAD4RC3E
		50-127 Vac	LAD4RC3G
		110-240 Vac	LAD4RC3U
		380-415 Vac	LAD4RC3N
Screw connection to the contactor coil terminals	LC●D80 to D150 (3P), LC1D80 to D115 (4P)	24–48 Vac	LA4DA2E
		50–127 Vac	LA4DA2G
		110–240 Vac	LA4DA2U
		380–415 Vac	LA4DA2N

Varistor Coil Suppressor

- Limitation of transient voltage value to 200% of nominal voltage maximum.
- Maximum reduction of transient voltage peaks. Slight increase in drop-out time (1.1 to 1.5 times normal).

Table 18.58: Varistor (Peak Limiting) for Reduction of Electrical Noise in AC Contactor Coils

Installed by	Mounting on	Operating Voltage	Catalog Number
Snapping into the cavity on the right side without tools[17]	LC●D09 to D38 (3P), LC1DT20 to DT40 (4P)	24–48 Vac	LAD4VE
		50–127 Vac	LAD4VG

[18] Installing the suppressor into the cavity makes the electrical connection. Overall width of the contactor remains the same.
[19] For LC●D09–LC●D65A with DC or low consumption DC coils, 3-pole contactors are fitted with built-in bidirectional diode suppression as standard.
[20] Mounting at the top of the contactor on coil terminals A1 and A2.
[21] For 24 V operation, the contactor must be fitted with a 21 V coil: coil voltage code Z5 for 50 Hz; Z6 for 60 Hz; and ZD for DC.
[22] Adapter required for D09–D65A, see Cabling Accessories, page 18-18.

These clear plastic protective shrouds are an effective means to meet international touch-safe requirements for power terminals. They are designed to be used with power cables that have been bolted to the terminal.

NOTE: The protection shrouds do not attach to contactors or overloads using **DZ2F** lug kits.

Table 18.73: Power Terminal Protection Shrouds

For Use With 2-, 3-, And 4-pole Contactors	Number of Shrouds Per Set	Catalog Number
LC1F115	6	LA9F701
LC1F150, F185	6	LA9F702
LC1F225, F265, F330, F400 and F4002, F500 and F5002	6	LA9F703
LC1F630, F6302 and F800	6	LA9F704

TeSys F dimensions: TeSys™ F Contactors, Dimensions, page 18-53, TeSys™ F Overload Relay Dimensions, page 18-61

[30] Lug kits ending in the number **6** include 6 identical lugs. In some cases the LR9F overload relay mounted directly on the load side of an LC1F contactor will require a different size lug for your choice of contactor and overload. If the two sizes are different, order 3 of each size lug. Mounting hardware (screws, washers, and nuts) are provided with the contactors and overload relays, not with the lugs.

[31] Lugs for LC1F contactors and overload relays must be ordered separately. Each kit consists of one lug. Mounting hardware (screws, washers, nuts) are provided with the contactors, not the lugs.

[32] For 2-pole F630 contactors, order two DZ2FL1 (L1 and T2), and two DZ2FL3 (L2 and T1).
For 4-pole F6304, order two DZ2FL1 (L1 and T4), four DZ2FL2 (L2, T2, L3, T3) and two DZ2FL3 (L4 and T1).

These clear plastic protective shrouds are an effective means to meet international finger-safe requirements for power terminals. They are designed to be used with power cables that have been bolted to the terminal.

NOTE: Protection shrouds do not attach to contactors/overloads using DZ2F lug kits.

The TeSys U motor starter is integrated, making it simple to choose and install. It consists of a control unit snapped in a power base. TeSys U can be configured to fit specific applications as well. Optional accessories include a reverser, a current limiter, predictive maintenance options, and communication options.
For detailed information about TeSys U, visit our website.

Table 18.96: Function Modules *[16][19]*

Module	Description	For use with:	Operation Requirements	Catalog Number
Fault differentiation with manual reset (thermal overload)	Provides indication between an overload trip and a short circuit trip.	Advanced control units only	24–250 Vac or Vdc (power from control unit)	LUFDH11
Fault differentiation with auto reset				LUFDA10
Thermal overload pre-alarm	Signals when the motor current reaches 1.05 of the full load setting on the control unit.	Advanced control units only	24–250 Vac or Vdc (power from control unit)	LUFW10
Motor load indication	Provides a signal proportional to the average currents in the three phases divided by the full load current setting of the control unit. The output corresponds to a load status of 0–2 times the full load setting of the control unit.	Advanced or multi-function control units	4–20 mA (requires separate 24 Vdc power supply)	LUFV2
Parallel wiring	Provides a convenient way to reduce control wiring and allow for connecting starters to a communications network by providing 24 Vdc for the starters.	Advanced or multi-function control units (24 Vdc only) and LU9BN11C or LU9MRC prewired connector	LU9G02 splitter box and PLC network	LUFC00

[8] See Power Base and Plug-in Accessories, page 18-24 for placement on the power base.
[9] Voltage code required.
[10] The control unit contains solid-state overload relay and control power source for TeSys U. For more details on the different control units, their functions, and placement on the power base see Power Base and Plug-in Accessories, page 18-24.
[11] Control units for 4.5–18 and 8–32 can be used **only** with 32 A rated power bases (LUB32, LUB320, and LU2B32).
[12] Complete the catalog number by adding the appropriate code from Table 18.92 Voltage Codes, page 18-25 (for example, LUCAX6FU).
[13] DC voltage with range of 0.90 to 1.10 of nominal.
[14] Voltage code to use for a power base with a communication module.
[15] 48–72 Vdc; 48 Vac
[16] See Power Base and Plug-in Accessories, page 18-24 for placement on the power base.
[17] Increases the breaking capacity of the motor starter.
[18] Offers motor management system capabilities. For more details see the LUCM on Communication Modules and Control Circuit Accessories, page 18-26
[19] Offers customization for specific application requirements.

Type 4/4X enclosure

2. Choose Thermal Overload Relay (Plug-in Control Unit)

The thermal overload relay is a control unit that plugs into the TeSys U starter. No tool is needed to install or remove the control unit.

If you do not wish to select the thermal overload relay at this time, select Thermal Overload Relay Type codes N1 or N3 in function of the motor configuration (single phase or 3–phase) in Thermal Overload Protection Types, page 18-28. A thermal overload relay can be selected and ordered later on (independently) before installation.

In order to select a thermal overload relay, you must follow the next 2 steps. First, select the thermal overload protection type code in Thermal Overload Protection Types, page 18-28. Secondly, select the full load amperage code in Full Load Amperage Code, page 18-28.

4. Choose Communication Type

If you do not need communication capabilities, select communication code N.

If a Communication protocol is selected, Control Voltage must be 24 Vdc (Control Power Source Codes BD, BD1, BD2 or BD6 only. Refer to Control Power Source Code, page 18-29).

If additional I/O is needed with communication, select communication code N in Table 18.104 Communication Code, page 18-29 and choose between Forms W10, W11, W12, W13 and W14 from Distributed 6 Input/6 Output Modicon STB with Communication Forms, page 18-31.

Table 18.104: Communication Code

Communication Protocol	Communication Code
Modbus	M
Modbus TCP/IP	E
CANopen	C
DeviceNet	D
Beckoff	B
Profibus	P
Advantys STB	A
AS-interface	J
AS-interface V2	K
No Communication	N

5. Choose Factory Modifications

When choosing Factory modifications, the Form code must be added at the end of the catalog number. If several forms are selected, they must be arranged in alphabetical order. There are two types of Forms available: abbreviated forms and standard forms.

[22] Form S must be added at the end of the catalog number.
[23] Form S6 must be added at the end of the catalog number. Current limiter is provided and factory installed.
[24] Two fuses in primary and one fuse in secondary provided as standard.
[25] Fuse holder with 2 fuses provided as standard.

5.1 Abbreviated Forms

Abbreviated forms are defined combinations of the most commonly ordered standard forms and are part of the profiled configurations with short lead time. For example, abbreviated form CP1 is a combination of standard forms C and P51.

Abbreviated forms cannot be mixed with other standard forms, with the exceptions of forms S and S6. If your combination of forms is not available as an abbreviated form, use only standard forms and arrange them in alphabetical order. For example, LE1U16BDG7NCP1S is a valid catalog number with the abbreviated form CP1. If you want to add standard Form P68, the valid catalog number becomes LE1U16BDG7NCP51P68S. LE1U16BDG7NCP1P68S is invalid because abbreviated form CP1 cannot be used with standard form P68.

TeSys H™ Ultra Compact Starters

TeSys H ultra compact motor starters are extremely compact motor starters for asynchronous motors (AC53a utilization category) and resistive loads (AC51 utilization category). With up to 75% space savings, the 22.5 mm wide starter maintains that width even for a reversing starter! An available safety version features embedded Safe Torque Off and is SIL3 according to IEC 61508-1 and Ple according to ISO 13849-1. TeSys H is ideal for industries such as food and beverage, logistics, and durable goods.

Table 18.122: TeSys H Voltage Codes

24 Vdc	110-230 Vac (50/60Hz)
BD	FU

[28] Motor Voltage must be equal to or less than 480 Vac and Control Voltage must be 24 Vdc (Control Power Source Codes BD, BD1, or BD2 only). Refer to Control Power Source Code, page 18-29.
[29] Distributed I/O Modicon STB is factory wired.
[30] Complete the catalog number by adding the voltage code from TeSys H Voltage Codes, page 18-32. For example, LZ1H2X4 becomes LZ1H2X4BD.
[31] For spring terminals, add 3 to the catalog number prior to adding the voltage code. For example, LZ1H2X4BD becomes LZ1H2X4**3**BD.

GV2ME

TeSys™ GV Family

The TeSys GV family of products are 3-pole, horsepower rated, UL 508 listed manual starters. They include a manual disconnect, class 10 ambient-compensated thermal overload relay, and instantaneous, magnetic trip mechanism in one compact unit.

Any GV manual starter can be used alone for local manual control of a motor with individual full-load currents up to 220 A. The GV products may also be used in group motor installations in accordance with National Electric Code article 430-53. Group motor installations give you greater panel density for smaller size and require fewer parts and less wiring for installation when compared to conventional panel designs.

The GV2P and GV3P products also have an additional UL508 Type E rating as a stand-alone, self-protected manual combination starter. The UL508 Type E rating requires the addition of line side insulating barrier GV2GH7 for the GV2P or a GV3G66 line side insulating barrier and a GVAM11 short circuit signaling contact for the GV3P. The GV2P and GV3P self-protected manual combination starters may also be combined with specific size contactors from the LC1D product family for a UL508 Type F combination starter construction. These products have a UL-listed short circuit current rating from 10–100 kA depending on application size and voltage. Refer to the Motor Control Solutions for the North American Market data bulletin (8536DB0901) for more information.

Table 18.135: GV3P Accessories

Accessory	Application / Use With	Standard Pack	Cat. No.
Through-the-door operating mechanism kits	NEMA 1, 12, Black with trip indication, for use with GV3P	1	GV3APN01
	NEMA 1, 12, Red/Yellow, with trip indication, for use with GV3P	1	GV3APN02
	NEMA 3R, 4, 4X Red/Yellow without trip indication, for use with GV3P	1	GV3APN04
Angle bracket	Operating mechanism support shaft for deep enclosures (≥ 300 mm), for use with GV3P	1	GVAPK12
Mounting bracket	Mounting bracket for installing GV3P operating mechanism	1	GVAPH03
3-pole, 115 A busbar	For feeding 2 GV3P starters, 64 mm pitch	1	GV3G264
	For feeding 3 GV3P starters, 64 mm pitch	1	GV3G364
Incoming line spacer	Line spacer for GV3P when used in UL 508 Type E applications. One spacer required on line side.	1	GV3G66
IP 20 cover	IP20 protective cover for ring tongue versions of GV3P and 3-pole TeSys D Everlink contactors. Two covers required for line and load side.	1	LAD96570
Padlocking device	For use with up to 4 padlocks (not supplied). Ø 6 mm shank maximum	1	GV2V03
Operating mechanism short shaft	One-piece short shaft for installing operating mechanisms in shallow enclosures, for use with GV2P, GV3P and TeSys U	1	GVAPA2
SoLink non-reversing communications link	Connection module for directly mounted GV3 and TeSys D contactor to PLC	5	LAD5C31
SoLink reversing communications link	Connection module for directly mounted GV3 and reversing TeSys D contactor to PLC	3	LAD5C32
Laser tool	Laser tool for installing through-the-door kits	1	GVAPL01
S-shaped busbar	For connecting GV3P starters and LC1D40A-65A contactors side by side without intrawiring	1	GV3S

[38] To order an undervoltage trip: replace the bullet (●) with a **U** (for example, GVA**U**025).
To order a shunt trip: replace the bullet (●) with an **S** (for example, **GVAS025**).
[39] From the loss of voltage at the trip terminals to the opening of the starter contacts.
[40] One trip or one fault signaling can be fitted per GV3.
[41] Cannot be used with **GV2GH7** insulator.
[42] Mounting of a **GVAE** contact block or a **GV2AK00** visible isolation block on **GV2P**.
[43] Choice of N.C. or N.O. contact operation, depending on which way the reversible block is mounted.
[44] For spring terminals, add **3** to the catalog number (for example, **GVAE113**).
[45] The **GVAD** is always mounted next to the starter.

Enclosed TeSys™ D Starters

TeSys D enclosed full-voltage starters are available in Type 1 and Type 12/3R enclosures. The enclosed TeSys D offer accepts standard TeSys D accessories and all Insta-Kits™ control units and control power transformer kits. Standard capacity control power transformers with built-in fuse block can be installed in the standard enclosure. For extra capacity, please refer to your local distributor or Schneider Electric sales office.

Table 18.143: Catalog Number Nomenclature

Catalog Number Example: LE1D093A62 O G 7 1 07

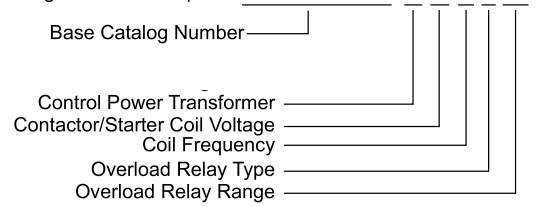

Table 18.144: Control Power Transformer

Select letter for primary voltage of CPT:

Voltage	No Transformer used	208	240	480	600
Code	O *[50]*	L	M	T	X

NOTE: If control transformer is used, the only options available are 24 or 120 V as the secondary of the transformer. Also, DC voltages are not available when control power transformer is used.

Table 18.145: Contactor/Starter Coil Voltage

Select coil voltage from table:

Voltage	24	120	208	240	480	600
AC	B	G	L	U	T	X
DC	B	—	—	—	—	—

Coil Frequency

Select:

7 = dual frequency coils (50/60 Hz)
6 = 60 Hz.
D=DC

NOTE: For 9 to 65 A contactors, only dual frequency coils are available; 80 A contactors, the 24–240 V coils are dual frequency only (50/60 Hz). The 480–600 V coils are 60 Hz. only. See catalog MKTED210011EN for other restrictions.

Overload relay type

Select:

0 = No overload relay
1 = Class 10 Trip
2 = Class 20 Trip

TeSys D dimensions: TeSys D Combination Starter Dimensions, page 18-62

[47] If no overload relay is required, leave this portion of the catalog blank.
[48] Available for Class 10 only.
[49] Available for Class 20 only.
[50] Letter O, not zero.

TeSys™ D Enclosed Fusible, Circuit Breaker and Non-Fusible

IEC combination starters combine the requirements of motor overload and short circuit protection in one convenient compact package. All devices provide Type 2 Coordination through 30 hp at 460 V. Devices are available in Type 1 and Type 12/3R enclosures. The IEC combination starter line accepts standard TeSys D accessories and all Insta-Kits™ pilot devices and control power transformer kits. Standard capacity control power transformers with built-in fuse block can be installed in the standard enclosure. For extra capacity, please refer to your local distributor or nearest Square D/Schneider Electric sales office.

NOTE: Use tables and notes from Enclosed FVRS, Overload Relays, page 18-38 to complete the catalog numbers.

Factory Modifications and Insta-Kits™ Selection

Add the factory modification code to the end of the catalog number created from Enclosed TeSys™ D Starters and Combination Starters, page 18-38. With the use of Insta-Kits™, only one operator scheme is allowed. Only the combinations of operators and pilot lights shown below can be ordered.

Pilot lights will be at the coil voltage indicated in the catalog number for the starter.

Table 18.152: Factory Modifications

Code	E	D	C	B	A	L	M	T	X

[51] Add these forms to the catalog number selected from Overload Relay Range, page 18-38. The numbers as shown are for use in NEMA 1 Enclosures. For uses in NEMA 12/3R change the 6 to a 7 (ex. A06U becomes A07U). Price remains the same. The change DOES NOT apply to control power transformer forms.

[52] Complete the part number for the Insta-Kits™ by selecting the voltage code from Table 18.153 Insta-Kits™ Selection, page 18-40.

[53] Pilot lights are wired such that the light is on when the contactor is energized. For non-LED type pilot lights, a green lens is installed on the unit when shipped. A red lens is included for use as applicable.

[54] Select Insta-Kits™ from Table 18.153 Insta-Kits™ Selection, page 18-40.

LS1D30

TeSys™ LS1 Fuse Holders

- 45 mm wide (same dimensions as GV2ME)
- Available with screw clamp and spring type terminals
- Mounts directly to LC1D09–D38 contactors (with use of GV2AF3 or GV2AF4)
- Meets application needs for fusible starter
- Uses GV2AE instantaneous contact blocks to open control circuits
- DIN rail mounted

Application Note on Contactor Drop-out Times

Contactors using LX1, FH, FJ, FK, FL, and FX coils have longer drop-out times. For critical applications such as emergency stop functions:

- Select a fast drop-out coil (LX9), or
- Use a maintained contact Stop button, or
- Use an interposing relay.

[7] For old style contactors where the catalog number includes the auxiliary contact arrangement (for example, LP1D8010). The new style TeSys DC controlled contactors (for example, LC1D80BD) do not have replaceable coils.

[8] Wide range coils cannot be used with contactors using both front- and side-mounting auxiliaries.

TeSys F DC Coils

LX4 coils are the standard coils when a voltage code is added to the part number. The LX9 coils may be ordered separately for special applications. LX9 coils do not include a built-in normally open holding circuit contact; a separate auxiliary contact block with an N.O. contact should be added to the contactor. Both the LX4 and LX9 coils can be used on previous TeSys F devices.

Table 18.169: LX4 Coils for LC1F115, F150, F185, F225, F265, F400, F500, F630, F780, F800

TeSys™ AK5 Panel Busbar System

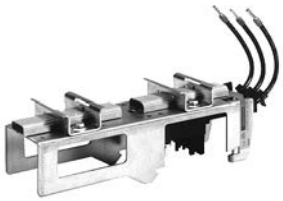

The AK5 pre-fabricated bus bar system provides a quick and easy method of mounting control devices. All components are finger safe, UL Listed, CSA approved and CE marked. Although the AK5 system can be screw mounted onto any type of support, it **must be mounted** on the AM1DL201 DIN rail when component mounting plates incorporating a tap-off are used. When using tap-offs, the nominal operating current of the bus bar (160 A @ 35°) must not be exceeded. Approvals include IEC 439, UL, CSA, DNV and LROS.
